

# Using Housing as a Platform for Service: Building on Resident Input and Engagement

Leiha Edmonds, Somala Diby, and Micaela Lipman

Moderated by Elsa Falkenburger

August 2, 2017

## **Housing Opportunity and Services Together (HOST) and Using Data Walks in Research**

# Housing Opportunities and Services Together (HOST) Demonstration

HOST uses housing as a platform to provide comprehensive services to vulnerable residents in public housing and mixed income developments

HOST aims to improve the health and well-being of adults, as well as improving academic outcomes and reducing risky behavior for youth

# Three Original HOST Sites

Chicago, Illinois  
Altgeld Gardens

Portland, Oregon  
New Columbia  
Humboldt Gardens

Washington, DC  
Benning Terrace

# Original HOST Goals

- Test feasibility of comprehensive service models for public and mixed income communities
- Demonstrate that intensive, dual-generation service approaches can improve life chances for public housing families
- Test whether serving most vulnerable residents promotes community stability

# Common Elements Across Sites

- Coordination, collaboration, and leveraging
- Strength-based coaching approach
- Clinical mental health, workforce development, youth services
- Two-generation approach
- Intensive case management (1:30 case loads)

# Feedback Loop for Real-Time Learning

# Engaging Community: Data Walks

# What is a Data Walk?

## Data Walk:

- Interactive, facilitated, visual presentation of data

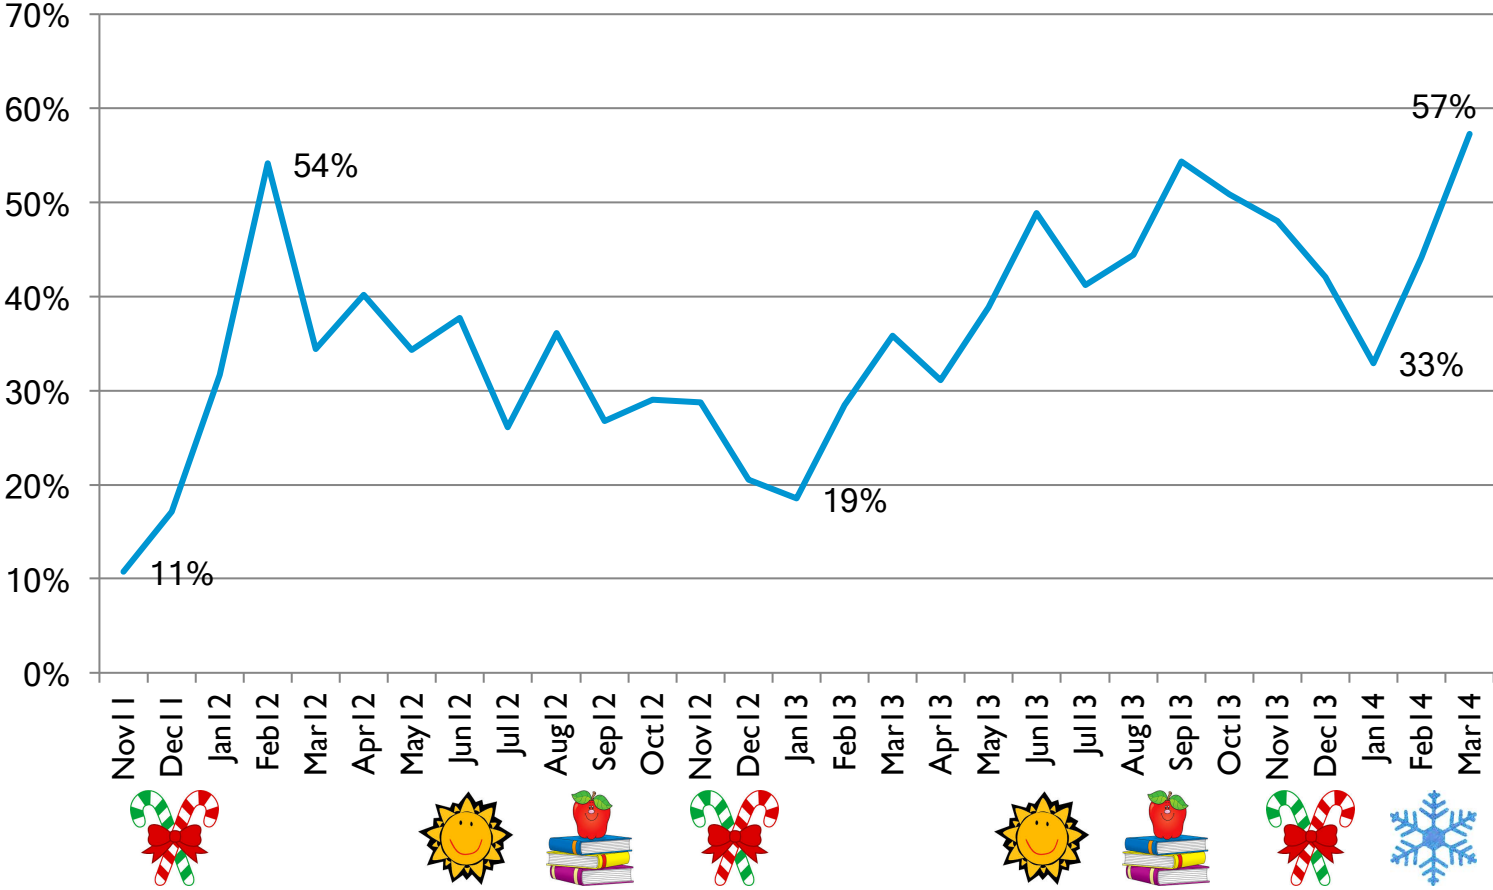

## Focus Groups:

- Facilitated discussion to capture reactions to data

# HOST Adult Participation in Services is Inconsistent, and Not All Adults Participate

% of adults to participate in HOST services

## Residents Respond:

*“[My case manager] even helped my [child] because she got him to see the psychologist. He went to [one therapist] first, but he thought he knew nothing about his problems. I had to honor that, I talked to [my case manager] to see maybe he would respond to [another therapist]. And he does. She comes to pick him up, because he doesn’t want to walk,” – HOST Adult*

**Using quantitative and  
qualitative data to  
enrich research findings  
and create impact**

## Inform PHA Practice and Policy:

- Staff interviews identified gaps in both data collection and programming for children and youth
- PHA plans to make intentional changes to its programming—target early childhood

# Inform New Research

- Focus groups reveal strategic role that teens play in navigating food insecurity
- Urban Institute partners with Feeding America to understand teen food insecurity and design unique interventions

## Strengthening research through community engagement

### Lessons from an adolescent pregnancy prevention program

*Somala Diby*  
*August 2, 2017*

# What is PASS?

A place-based, multi-generational intervention to  
**P**romote **A**dolescent **S**exual health and **S**afety  
at the individual, environmental, and behavioral levels.

**KNOWLEDGE, EMPOWERMENT, CHOICE, ACCESS**

# What is PASS?

**2012 – 2015:** Designed and piloted in Benning Terrace DCHA community (NIH)

**2016 – 2020:** 5-year formative evaluation (Family and Youth Services Bureau, ACF, HHS)

Developed in response to DCHA and resident concerns for DCHA youth, young girls in particular:

- Sexual violence and coercion
- Teen pregnancy
- HIV and STIs

# What is PASS?

<b>THREE CURRICULA</b>	Sisters Rising Brothers Rising Parents Matter
<b>TARGETS YOUTH AND ADULTS</b>	Youth ages 13 – 19 Adult residents, parents, and care-givers
<b>RESIDENTS DELIVER CONTENT</b>	2-3 trusted male and female adults from the community are co-facilitators

# Unlike most adolescent pregnancy prevention programs, PASS...

**Meets teens  
where they live,  
not just in school**

**Engages community  
members as  
co-researchers**

**Embeds sexual health in  
a broader wellness  
framework**

# Value-add of community engagement

# Rarely do research “subjects” have the opportunity to collaborate in research

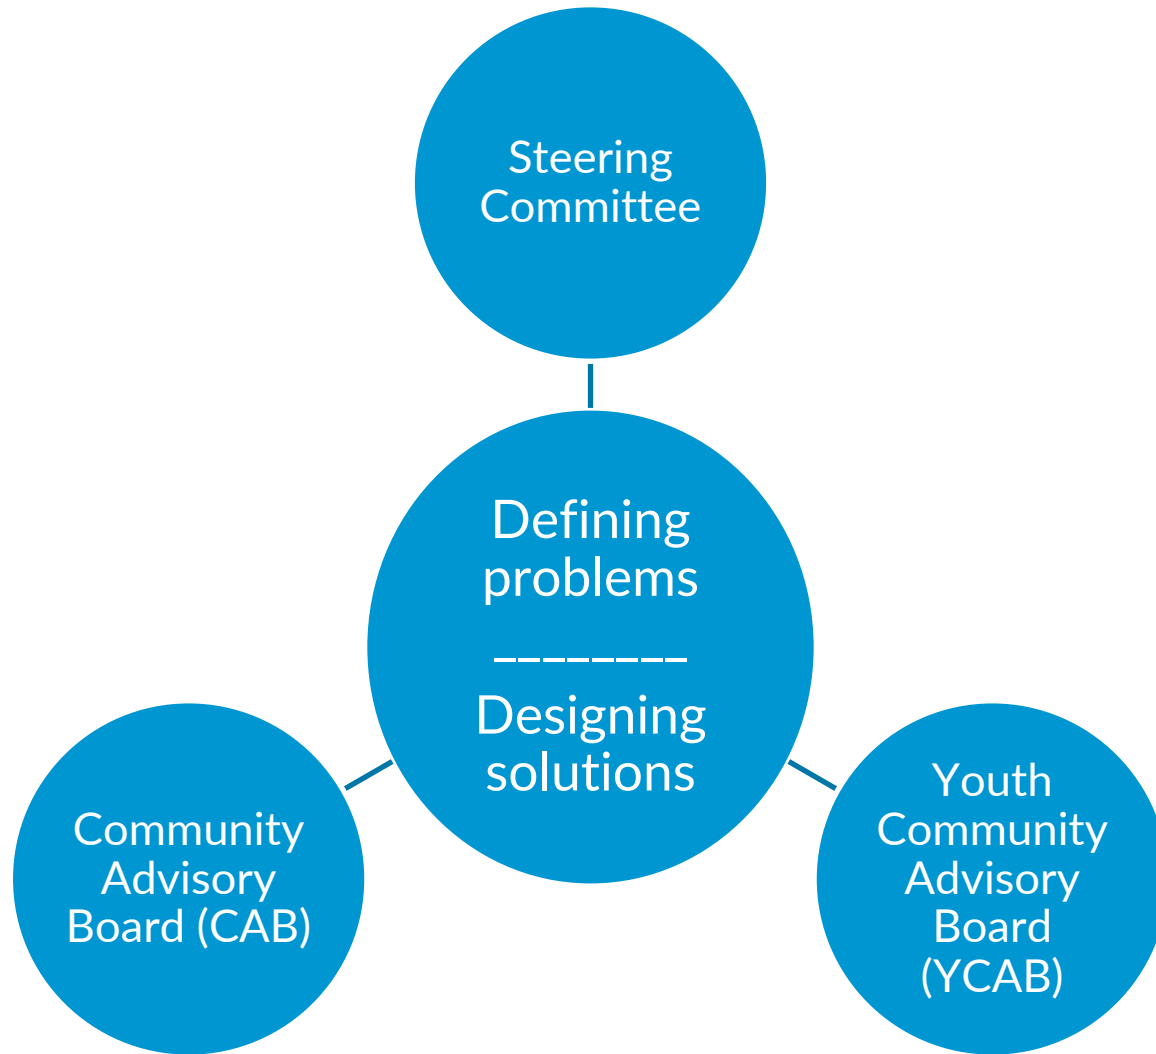

- Traditional research profession values academic expertise
- Professional researchers control research and knowledge

# Those most impacted tend to offer the most ingenious ideas to remedy their challenges

# Conceptualizing the research

# Instrument Design and Data collection

- Community input refined the survey language and streamlined the instrument
- Trust, transparency, and buy-in led to higher response rates on surveys

# Data Analysis

# A stronger intervention overall

- Fortified trust
- Building community capacity to self-organize and design solutions

# Integrating CBPR into your project

# Building relationships take time and managing expectations is not easy

- Significant time and resource investment
- Showing up to community events beyond the scope of PASS

But the effort is worth the outcomes

**“It felt like research in the beginning, but it felt like family at the end, because we all came together. It wasn’t nothing [we] couldn’t talk about and that’s how it is with family. There shouldn’t be nothing you shouldn’t be able to talk about. I don’t care how big it is, how small it is. That’s just how it is.”**

**(Benning Terrace resident and PASS co-facilitator)**

# Assessing your projects

- ✓ Consider if your entire project or just certain research tasks would benefit from a community-based approach.
- ✓ Discuss potential partnership with CBO or community members – identify common areas of interest, goals, and resources needed.
- ✓ Write up summary of methodology for research task(s) and roles of partnering entities.
- ✓ Incorporate new methodology into work plan and request IRB approval

# Initiating new CBPR projects

- ✓ Define the community boundaries, groups, members, and leaders.
- ✓ Meet the community (Email introductions, phone calls, in-person meetings if possible).
- ✓ Jointly draft a concept paper describing research questions, goals, and the roles of the various partners
- ✓ Apply for funding

URBAN

# Portland Teen Food Insecurity Research

August 2<sup>nd</sup>, 2017

*Micaela Lipman, Urban Institute*

# Why Food Insecurity?

One of the members of our community advisory board told us that families in her community ran low on food at the end of the month and said, “**And you know what the girls do when that happens...**” implying that girls were engaging in transactional sex to get food.

# Intersectionality of food insecurity

# Research questions

1. How do teens experience food insecurity in their families and communities?
2. What coping strategies, including risky behavior, do they use to survive?
3. What are barriers to teen participation in the current food assistance programs, and how could teens be better engaged?

Familiarity and experience with food insecurity is widespread

Teens are actively involved in acquiring and managing household food resources

Teens fear stigma and actively hide need

Teens engage in a variety of coping strategies

Teen seek work, both formal and informal and feel responsibility for younger siblings

Some also manage hunger with risky behaviors

Food Works

YCAB

# Challenges

- Stigma of charitable food options
- Teens view current food options as low quality
- Affordable food may be unhealthy
- Transportation is a barrier
- Cooking fresh food is a challenge
- Some food resources exclude teens

# Solutions

•Co-locate food distributions with services

Teen-led food distributions would attract teens

Do more teen-specific work

Take into account teens' families

Cultural competency matters

Engagement

# Youth Empowerment Program

# Harvest Share

# Community Engagement

<http://apps.urban.org/features/food-insecurity/>

# Challenges

- Cultural competency
- Reaching those most affected by food insecurity
- Staff turnover
- Establishing roles among partner organizations

# Looking forward

- Co-location within housing authorities, food banks, as well as schools
- Integrating wraparound mental health services to address risky behavior
- Addressing geographic diversity
- Working with younger teens
- Creating a more established peer mentoring structure

# Thank you!
